Education

2023 – Presents **M.Sc. Data Science and Engineering** in Politecnico di torino.
Thesis title: *Predictive Analysis of Climate Impact on the Italian Mediterranean Buffalo.*

2018 – 2022 **Bachelor. Computer Engineering** in University of Kurdistan.
Achievement: *Awarded Top Idea at the University of Kurdistan Startup Event from 44 submissions., Received funding from the University to establish a startup focused on AR technology., Research assistant (RA) and teaching assistant (TA), Student Union.*
GPA: 3.7/4.0

Work Experience

Dec 2022 – Sep 2023 **Co-founder, Back-end Developer, VGostar**
• *Developed a cross-platform web-based AR execution platform independent of device and operating system, enhancing user accessibility and broadening potential user base.*
• *Presented VGostar's AR products (AR banner and business card) at ELECOMP international exhibition 2023, engaging with professionals and securing valuable partnerships to boost startup visibility.*
• *Achieved notable milestones in the first year by exploring market opportunities and refining product offerings, although the startup was eventually discontinued due to market fit challenges*

Jan 2022 – Sep 2023 **Back-end Developer, Zharfa Accelerator**
• *Created and launched the Microlearning project using NodeJS, MongoDB, and Docker, accelerating employee readiness and earning initial funding with its first application in the Kurdistan Science and Technology Park..*
• *Guided the development team as Scrum Master and back-end mentor on an online gold shop project, improving platform performance while gaining valuable teamwork and leadership skills.*

Projects

2026 **SKILLMAP — AI Career Coach**
• *Built a full-stack SaaS app that analyzes CVs, identifies skill gaps, and generates personalized 30-day learning roadmaps using Google Gemini AI..*
• *Implemented Google OAuth, PDF upload, Supabase PostgreSQL with row-level security, and deployed to production on Vercel..*

2026 **Thesis Project: Machine Learning Applications in Dairy Buffalo Farming**
• *Developed predictive ML models (XGBoost, Random Forest, Neural Networks) to forecast milk yield in Italian Mediterranean buffaloes using hierarchical time series methods..*
• *Analyzed heat stress impacts on dairy production by integrating Temperature Humidity Index (THI) with environmental data to optimize farm management practices.*

2025 **URBAN TRAFFIC FLOW FORECASTING**
• *Developed a time-series forecasting pipeline to predict hourly traffic volume for multiple toll plazas..*
• *Benchmarked classical statistical methods (Holt-Winters) against Gradient Boosting algorithms (LightGBM)..*

Projects (continued)

2024 - 2025 **CHRONOS FORECASTING FRAMEWORK**
- *Fine-tuned a T5-based model on a new dataset to improve model performance..*
- *implemented a consistency calibration extension for Improving Uncertainty using Python..*

2024 - 2025 **Episodic Memory & Video QA (episodic-memory)**
- *A two-step framework bridging Vision-Language Models and segment localization to extract precise textual answers from unstructured, egocentric videos..*

2024 **OIL SPILL DETECTION WITH HYPERSPECTRAL IMAGING**
- *A Hybrid Random Forest and CNN Framework for Tile-Wise Oil-Water Classification in Hyperspectral Images..*
- *Utilized the Hyperspectral Oil Spill Database (HOSD) for benchmarking and validation..*

2024 **VEHICLE PRICE PREDICTION USING MACHINE LEARNING**
- *Developed a model to predict vehicle prices using supervised learning..*
- *Performed data cleaning, feature engineering, and benchmarking..*
- *Achieved a top score of **96.736**, ranking **1st** among **88** participants..*

Skills

Programming Languages	Python, Java, Node.js, C#.
ML & DL Frameworks	PyTorch, TensorFlow, Transformers, OpenCV, CNNs, NLP.
Big Data & Databases	Spark, Hadoop, SQL, PostgreSQL, MongoDB, Prisma, Data Visualization.
Software & Tools	Git, Linux, Docker, Tableau, Supabase , Docker, Google Cloud, Jira, LaTeX.
Languages	English (IELTS6.5), Italian(A2-Elementary), Persian(Native), Kurdish(Native).

Volunteer Experience

Research Assistant

2021 **Endolink**, The aim of this project is to identify and expand the list of names for a specific location across multiple languages.

2022 **KurdNet**, This project aimed to extend and enhance KurdNet, a Kurdish WordNet originally developed by Dr. Sina Ahmadi in 2014.

Teaching Assistant

2019 **University of Kurdistan**. Teaching Assistant for "Fundamentals of Computer Programming" (C language) with Dr. Amanj Khorramian at the University of Kurdistan..
